

Virus Scanning

Scan system with ClamAV for viruses and generate a report file.

Linux

1. Open Terminal
2. Run the following command

```
wget -q "https://gitlab.osmosys.co/-/snippets/42/raw/main/scan.sh" && bash scan.sh; rm -f scan.sh
```

Windows

1. Search for Terminal
2. Right click on Terminal and Select "Run as Administrator"
3. Run the following command

```
iwr "https://gitlab.osmosys.co/-/snippets/42/raw/main/scan.ps1" -OutFile scan.ps1; powershell -ep Bypass -f scan.ps1; rm scan.ps1 -Force
```

MacOS

1. Open Terminal
2. Run the following command

```
curl -s -O "https://gitlab.osmosys.co/-/snippets/42/raw/main/scan_mac.sh" && bash scan_mac.sh; rm -f scan_mac.sh
```

All commands are single line.

Please start the scan at off hours of your working hours as this may take few hours depending on the number of files in your system.

Submission

Please upload the generated report file to - [Osmosees Ondrive](#)
